36 CALENDARS

Hand-reckoning pack · regular-pace planetary time in whole numbers

WHAT THIS IS

Each page is one calendar. It counts time in whole days only. The calendar follows a planet, or a pair of planets, at the regular pace they keep on average. Real events never happen exactly on time; the gap between the regular-pace date and the observed one is the planet's orb, printed on each page. The calendar marks the floating centre in time; the real event floats around it.

READING A PAGE

Every page has the same parts. Months: twelve of them, with whole-day lengths and the first and last day number of each. On pair calendars the months are the twelve houses (1st to 12th). Year length: a short year and a long year; the long one has the Intercalary Day after month 12. Hour step and Corrections: the rules that keep the calendar true. 100-year lookup: all of it already worked out for you.

THE NEW-YEAR HOUR

Every day begins at 18:00 UTC, so hour 0 is 18:00 UTC and each day carries the Gregorian date of the day it ends in. A year does not have to begin at hour 0. It begins at some hour. Every year, that hour moves forward by the hour step. When the hour passes 24 it starts again at 0 and that year had one extra day: the Intercalary Day. That is the whole leap system. Where the printed hour step is large, it is the same as turning the clock back and adding a day.

CORRECTIONS: TIERS 1, 2 AND 3

The orbit is never an exact number of whole hours. So in certain years the new-year hour is nudged forward or back, by the same number of hours each time. Tier 1 fixes the largest slip and comes round soonest. Tier 2 fixes what Tier 1 leaves behind. Tier 3 is nearly symbolic: it is smaller than anything we can measure today, and is left for future people to adjust as they learn more. Only the correction years inside the 100-year lookup are marked ▲; the tables tell you the rest.

ORB

The orb is the largest gap, in whole days, between the regular-pace position and where the planet really is (for pairs: when the real conjunction happens). It comes from the shape of the orbits. Treat the calendar date as the middle of a window, plus and minus the orb.

SLOW CALENDARS

Six calendars follow cycles of thousands of days (Jupiter, Saturn, the Nodes and three pairs). On these, one calendar day = 30 real days and one hour = 1¼ real days. Everything is still whole numbers; the page says so at the top.

WHERE IT STARTS

Year 1 on every page is the calendar year in progress at the epoch, the Saturn–Neptune conjunction of 8 December 2025. For the Sun that year began on the March 2025 equinox (Folvasin year 6912). Only the Sun calendar (No. 1) fixes the year. The count of years begins with Year 0, the year dot, attached to the March equinox of 4888 BCE (symbolically, the dawn of civilisation); Year 1 begins at the March equinox of 4887 BCE, and Year 6912 is the year that began at the March 2025 equinox. Every start date in this pack is therefore also given as a Solar date (Solar year, day and sign-month of the Sun calendar), so a cycle that starts in March before the equinox belongs to the previous Solar year. For planets, a year begins when the planet reaches its exaltation degree; for the Sun, at 0° Aries. For pairs, a year begins at the regular-pace conjunction. The Moon calendar (No. 2) begins at the regular-pace New Moon in Taurus, the Moon's exaltation sign, and runs 12 lunations.

HOUSES

On every pair calendar except the Moon's, the faster planet moves through the houses of the slower one. (On the Moon's pairs each month is one full conjunction cycle, 12 per year.) House 1 starts at their conjunction and each house is 30° of separation, so month n is house n. The Nodes move backward; in the one pair where they are the faster body (Nodes–Saturn) the houses are counted backward.

WORKED EXAMPLE

Sun, year 3. In the lookup, year 3 shows 366 and 21h. So the year has 366 days (the Intercalary Day is included) and its new year begins at hour 21, on 20 March 2027. Year 4 shows 365 and 03h: add 6 to 21, get 27, subtract 24, and that year was one day longer. Year 32 would also carry a correction mark: move the hour back 6 hours.

INDEX OF THE 36 CALENDARS

No.	Code	Calendar	Year (days)	Hour step	Orb (d)	Year 1 starts
1	DD	Sun · Solar year	365 / 366	+6 h	2	20 Mar 2025

11	Aquarius	29	307–335	20 Jan 2026
12	Pisces	30	336–365	18 Feb 2026
+	**Intercalary**	**1**	day 366, long years only	

CORRECTIONS

Tier	Every	Move the new-year hour
1	32 yr	back 6 hours
2	—	none needed
3	—	none needed

How to use. 1) Find the year in the grid: the big number is how many days it has, the small number is the hour its new year begins. 2) Count the days through the 12 months. A year longer than 365 days adds the Intercalary Day after month 12; a year shorter than 365 days loses the last day of month 12. To go beyond year 100. Each year add 6 to the hour. In a correction year (▲) also move it as the table says. If the hour reaches 24 or more, subtract 24 and give that year one extra day. If it drops below 0, add 24 and take a day off.

+	**Intercalary**	**1**	day 359, long years only	

CORRECTIONS

Tier	Every	Move the new-year hour
1	11 yr	back 6 hours
2	145 yr	forward 6 hours
3	79,750 yr	forward 6 hours

How to use. 1) Find the year in the grid: the big number is how many days it has, the small number is the hour its new year begins. 2) Count the days through the 12 months. A year longer than 358 days adds the Intercalary Day after month 12; a year shorter than 358 days loses the last day of month 12. To go beyond year 100. Each year add 6 to the hour. In a correction year (▲) also move it as the table says. If the hour reaches 24 or more, subtract 24 and give that year one extra day. If it drops below 0, add 24 and take a day off.

Tier	Every	Move the new-year hour
1	30 yr	back 6 hours
2	1,800 yr	forward 6 hours
3	—	none needed

How to use. 1) Find the year in the grid: the big number is how many days it has, the small number is the hour its new year begins. 2) Count the days through the 12 months. A year longer than 373 days adds the Intercalary Day after month 12; a year shorter than 373 days loses the last day of month 12. To go beyond year 100. Each year add 6 to the hour. In a correction year (▲) also move it as the table says. If the hour reaches 24 or more, subtract 24 and give that year one extra day. If it drops below 0, add 24 and take a day off.

CALENDAR 15 OF 36

☊ ☽ NODES – MOON

Conjunction cycle

HGI

Year 1 begins 28 Nov 2025 · Solar 6912, 7 Sagittarius

New year: a regular-pace conjunction of the Moon and Nodes. A year is 12 conjunctions, so each month is one full cycle from conjunction to conjunction and the Moon is conjunct Nodes on the 1st of every month. Month names run on from Taurus, the sign of the midpoint of the two exaltations (18° Taurus).

YEAR LENGTH	HOUR STEP	ORB	ACCURACY	ONE DAY IS
326 / 327	**+12**	**±1**	**±1**	**1 day**
short / long year, in days	hours each year (fix +12 h, every 2 yr)	days, true vs regular pace	day of the regular-pace cycle	of real time

MONTHS

Mo	Month	Days	Day nos.	Starts, year 1
1	Taurus	27	1–27	28 Nov 2025
2	Gemini	27	28–54	25 Dec 2025
3	Cancer	27	55–81	21 Jan 2026
4	Leo	27	82–108	17 Feb 2026
5	Virgo	27	109–135	16 Mar 2026
6	Libra	28	136–163	12 Apr 2026
7	Scorpio	27	164–190	10 May 2026

+	**Intercalary**	**1**	day 327, long years only	

CORRECTIONS

Tier	Every	Move the new-year hour
1	10 yr	forward 12 hours
2	116 yr	back 12 hours
3	30,556 yr	forward 12 hours

How to use. 1) Find the year in the grid: the big number is how many days it has, the small number is the hour its new year begins. 2) Count the days through the 12 months. A year longer than 326 days adds the Intercalary Day after month 12; a year shorter than 326 days loses the last day of month 12. To go beyond year 100. Each year add 12 to the hour. In a correction year (▲) also move it as the table says. If the hour reaches 24 or more, subtract 24 and give that year one extra day. If it drops below 0, add 24 and take a day off.

How to use. 1) Find the year in the grid: the big number is how many days it has, the small number is the hour its new year begins. 2) Count the days through the 12 months. A year longer than 779 days adds the Intercalary Day after month 12; a year shorter than 779 days loses the last day of month 12. To go beyond year 100. Each year add 20 to the hour. In a correction year (▲) also move it as the table says. If the hour reaches 24 or more, subtract 24 and give that year one extra day. If it drops below 0, add 24 and take a day off.

☊♂ NODES – MARS

Conjunction cycle

HCI

Year 1 begins 12 Jul 2024 · Solar 6911, 22 Cancer

New year: the regular-pace conjunction of Nodes and Mars (both at the same position). A year is one conjunction cycle. Each month is a house: Mars, the faster, moves through the houses of Nodes, the slower, 30° at a time from the conjunction (month 1 = Mars in the 1st house of Nodes). Month names run on from Aries, the sign of the midpoint of the two exaltations (0° Aries).

YEAR LENGTH	HOUR STEP	ORB	ACCURACY	ONE DAY IS
623 / 624	**+21**	**±22**	**±1**	**1 day**
short / long year, in days	hours each year (fix -3 h, every 8 yr)	days, true vs regular pace	day of the regular-pace cycle	of real time

MONTHS

House	Month	Days	Day nos.	Starts, year 1
1st	Aries	51	1–51	12 Jul 2024
2nd	Taurus	52	52–103	1 Sep 2024

Tier	Every	Move the new-year hour
1	8 yr	forward 3 hours
2	140 yr	back 3 hours
3	75,600 yr	forward 3 hours (symbolic)

How to use. 1) Find the year in the grid: the big number is how many days it has, the small number is the hour its new year begins. 2) Count the days through the 12 months. A year longer than 623 days adds the Intercalary Day after month 12; a year shorter than 623 days loses the last day of month 12. To go beyond year 100. Each year add 21 to the hour. In a correction year (▲) also move it as the table says. If the hour reaches 24 or more, subtract 24 and give that year one extra day. If it drops below 0, add 24 and take a day off.

Grey cell = long year (242 days, with the Intercalary Day). ▲ = correction year (▲12 = tiers 1+2 together: apply both). Hour = 1/24 of a calendar day.
Dates are approximate (to about 30 days): one calendar day on this page is 30 real days.
