JUPITER CULT ALMANAC

3 printable calendars · whole days · universal template

Contents

Page	Master no.	Calendar	Short / long year	Month rule
2 (table 3)	6 (BB)	♃ JUPITER	144 / 145 days (1 day = 30 real days)	real apsides + table
4	36 (BA)	♃☌♄ JUPITER – SATURN	241 / 242 days (1 day = 30 real days)	houses, equal
5	34 (HBI)	☊☌♃ NODES – JUPITER	88 / 89 days (1 day = 30 real days)	houses, equal

How to use these pages

1. Every page is a blank template and never changes. Print it again each year.
2. Fill the top blanks (year, Gregorian date, new-year hour) from the matching Master calendar, and tick short or long year from its 100-year grid.
3. Write each month's starting date in its “starts _____” blank, counting the day numbers from the Master's month table.
4. The last box of the year is split and yellow. In a short year the year ends on the top-left number; in a long year it ends on the bottom-right number (the Intercalary Day). The calendar has exactly as many boxes as a short year has days, and day 1 of month 1 appears once, in its own place.
5. Eccentric months: the twelve lengths are the real ones at the epoch (long months where the planet is slow, short where it is fast). The planet's apsides drift very slowly, so the Month-Length Table page after each such calendar lists the years from which the twelve lengths change.
6. Days begin at 18:00 UTC, so hour 0 is 18:00 UTC and each day carries the Gregorian date of the day it ends in.
7. Pair calendars have equal months. Each month is a house of the slower planet, except on the Moon's pairs, where each month is one full conjunction cycle (the conjunction falls on the 1st of every month).

♃ JUPITER

Jovian year

CALENDAR 6 OF 36 · Jupiter almanac

short year 144 days · long year 145 days · hour step +8

BB

Year begins when Jupiter reaches its exaltation, 15° Cancer. Longest months are around the 4th month (apogee), shortest around the 10th (perigee). Months change slowly: see the Month-Length Table. One box = 30 real days.

Year (Folvasin): _____ Gregorian date: _____ New year hour: _____ ☐ short year (144 d) ☐ long year (145 d)

11									

Small grey number = day of the year. The last box is split: the top-left number is the last day of a SHORT year, the bottom-right number is the last day of a LONG year (the Intercalary Day). Day 1 of month 1 appears only once.

Complete the blanks from Master calendar 6 of 36 (year, dates, new-year hour).

MONTH-LENGTH TABLE · ♃ JUPITER (BB)

Calendar 6 of 36 · page 1 of 1 · short year 144 days

BB

The planet's apsides drift slowly against the fixed month boundaries, so month lengths change now and then (a day moves from one month to another, so the year stays 144 days). Find the latest row whose own-year number is not more than the current year; use that row's twelve lengths from the start of that year. Yellow cells show what changed. Rows cover about 5,000 years after the epoch and the last row stays in force after that.

From own year	Folvasin yr ≈	1st Can	2nd Leo	3rd Vir	4th Lib	5th Sco	6th Sag	7th Cap	8th Aqu	9th Pis	10th Ari	11th Tau	12th Gem	Total
