How to use these pages

1. Every page is a blank template and never changes. Print it again each year.
2. Fill the top blanks (year, Gregorian date, new-year hour) from the matching Master calendar, and tick short or long year from its 100-year grid.
3. Write each month's starting date in its “starts _____” blank, counting the day numbers from the Master's month table.
4. The last box of the year is split and yellow. In a short year the year ends on the top-left number; in a long year it ends on the bottom-right number (the Intercalary Day). The calendar has exactly as many boxes as a short year has days, and day 1 of month 1 appears once, in its own place.
5. Eccentric months: the twelve lengths are the real ones at the epoch (long months where the planet is slow, short where it is fast). The planet's apsides drift very slowly, so the Month-Length Table page after each such calendar lists the years from which the twelve lengths change.
6. Days begin at 18:00 UTC, so hour 0 is 18:00 UTC and each day carries the Gregorian date of the day it ends in.
7. Pair calendars have equal months. Each month is a house of the slower planet, except on the Moon's pairs, where each month is one full conjunction cycle (the conjunction falls on the 1st of every month).

MONTH-LENGTH TABLE · ♂ MARS (CC)

CC

The planet's apsides drift slowly against the fixed month boundaries, so month lengths change now and then (a day moves from one month to another, so the year stays 686 days). Find the latest row whose own-year number is not more than the current year; use that row's twelve lengths from the start of that year. Yellow cells show what changed. Rows cover about 5,000 years after the epoch; continued overleaf.
