SEPARATION TABLE · degrees to days for the 28 pairs

Mean heliocentric motions · separation = angle between the two mean longitudes · whole numbers, real days unless the 1-calendar-day column says otherwise

Almanac	No.	Pair (faster – slower)	Degrees per day	Days per 10°	Days per 30°	Conjunction every (days)	About years	Calendar month (days)	Year S / L (cal. days)	1 cal. day =	° per cal. day
Moon	10	☽ **Moon – ☿ Mercury**	9	1	3	40	under 1	39–40	475 / 476	1 d	9
	11	☽ **Moon – ♀ Venus**	12	1	3	31	under 1	31–32	373 / 374	1 d	12
	9	☽ **Moon – ☉ Sun**	12	1	2	30	under 1	29–30	354 / 355	1 d	12
	12	☽ **Moon – ♂ Mars**	13	1	2	28	under 1	28–29	341 / 342	1 d	13
	13	☽ **Moon – ♃ Jupiter**	13	1	2	27	under 1	27–28	329 / 330	1 d	13
	14	☽ **Moon – ♄ Saturn**	13	1	2	27	under 1	27–28	328 / 329	1 d	13
	15	☽ **Moon – ☊ Nodes (Nodes retrograde)**	13	1	2	27	under 1	27–28	326 / 327	1 d	13
Mercury	22	☿ **Mercury – ♀ Venus**	2	4	12	145	under 1	12	144 / 145	1 d	2
	16	☿ **Mercury – ☉ Sun**	3	3	10	116	under 1	9–10	115 / 116	1 d	3
	23	☿ **Mercury – ♂ Mars**	4	3	8	101	under 1	8–9	100 / 101	1 d	4
	24	☿ **Mercury – ♃ Jupiter**	4	2	7	90	under 1	7–8	89 / 90	1 d	4
	25	☿ **Mercury – ♄ Saturn**	4	2	7	89	under 1	7–8	88 / 89	1 d	4
	26	☿ **Mercury – ☊ Nodes (Nodes retrograde)**	4	2	7	87	under 1	7–8	86 / 87	1 d	4
Venus	17	♀ **Venus – ☉ Sun**	under 1	16	49	584	2	48–49	583 / 584	1 d	under 1
	27	♀ **Venus – ♂ Mars**	1	9	28	334	under 1	27–28	333 / 334	1 d	1
	28	♀ **Venus – ♃ Jupiter**	2	7	20	237	under 1	19–20	236 / 237	1 d	2
	29	♀ **Venus – ♄ Saturn**	2	6	19	229	under 1	19–20	229 / 230	1 d	2
	30	♀ **Venus – ☊ Nodes (Nodes retrograde)**	2	6	18	218	under 1	18–19	217 / 218	1 d	2
Sun	18	☉ **Sun – ♂ Mars**	under 1	22	65	780	2	64–65	779 / 780	1 d	under 1
	19	☉ **Sun – ♃ Jupiter**	under 1	11	33	399	1	33–34	398 / 399	1 d	under 1
	20	☉ **Sun – ♄ Saturn**	under 1	11	32	378	1	31–32	378 / 379	1 d	under 1
	21	☉ **Sun – ☊ Nodes (Nodes retrograde)**	1	10	29	347	under 1	28–29	346 / 347	1 d	1
Mars	31	♂ **Mars – ♃ Jupiter**	under 1	23	68	816	2	68	816 / 817	1 d	under 1
	32	♂ **Mars – ♄ Saturn**	under 1	20	61	734	2	61–62	733 / 734	1 d	under 1
	33	♂ **Mars – ☊ Nodes (Nodes retrograde)**	under 1	17	52	624	2	51–52	623 / 624	1 d	under 1
Jupiter	36	♃ **Jupiter – ♄ Saturn**	under 1	202	605	7,256	20	20–21	241 / 242	30 d	1
	34	♃ **Jupiter – ☊ Nodes (Nodes retrograde)**	under 1	73	220	2,646	7	7–8	88 / 89	30 d	4
Saturn/Nodes	35	☊ **Nodes – ♄ Saturn (Nodes retrograde)**	under 1	116	347	4,164	11	11–12	138 / 139	30 d	3

How to use. Everything here is in whole numbers, rounded to the nearest. Degrees per day is how fast the faster planet gains on the slower; for the slow pairs it is under 1, so use Days per 10° instead: after a conjunction, the pair is 10° apart that many days later, 20° twice that, and so on. Days per 30° is one house of separation. Calendar month is the month length printed on the pair's Master page; on the Moon's pairs a month is one whole conjunction, not a 30° house. Year S / L is the short and long year in calendar days. On the calendars whose cycle is 1,000 days or more, one calendar day equals 30 real days, so the last two columns give the scale. The Nodes move backward (about −0.053° a day), so every Node pair separates at the sum of the two rates. Figures are mean (regular-pace); rounding costs under half a day per 10° on the fast pairs, so for long separations use Days per 30° rather than multiplying a rounded figure. The separation seen in the sky differs from these by up to the orb printed on each Master page.

Days are mean-motion days (24 h). Conjunction every = 360° ÷ separation rate, rounded to a whole day.
