YEAR-END CARDS

Is the last box of this cycle the short day or the long day? Look it up by date. No counting needed.

What a card is. One card per calendar, listing the ten cycles from the one in progress on 10 November 2026: when each starts, how long it is, and its last day. Cards are in almanac order (Moon, Mercury, Venus, Sun, Mars, Jupiter, Saturn and Nodes); the number is the Master calendar number.

How to use one. Keep crossing off boxes as usual. When you reach the end of a cycle, find that cycle's row. If it says S (short), the cycle ends on the top-left number of the split box. If it says L (long), it ends on the bottom-right number, and the next cycle begins the following day. The last-day date is there as a check: if today's date is past it, the cycle has ended. Grey rows are long years. The hour is when the new year begins, counted from 18:00 UTC. ▲ marks a correction year.

Dates are Gregorian, and each day begins at 18:00 UTC and carries the date of the day it ends in. On the slow calendars (marked *) one box is 30 real days, so their last-day dates are approximate to within a month.

When a card runs out, reprint it from the Masters' 100-year grids (the rows are already there), or ask for a fresh set. Month-length changes on the single-planet pages are separate and are listed in the Month-Length Tables.
